NARRATIVE REPORT

☒ INTERIM

☐ FINAL

A monthly progress report for the month of July has been received.

Inspection visit of 28 September 1965.

Attendees:

During the visit, two mechanical configurations were shown to the monitor -- the difference between the two being the minimum separation of the rhomboids when rotated to the rear of the Zoom 70. The minimum spacing in the first configuration is 6.75 inches and the second 4.12 inches. In the first case, the rhomboid could be rotated 67° from the position of maximum separation and the second option would allow 102° rotation. After consideration of the geometrical configurations required, [redacted] was advised on 29 September that the 110° option would be the only option acceptable. Delivery of the instrument will not be before 15 December 1965. [redacted] will provide scales and indexing marks to indicate the amount of image rotation.
